6. When the installer launches, it will show different workloads and individual components you can install. Workloads are predefined sets of tools and features that are grouped together based on common development scenarios. You can choose the workloads that best fit your needs, or you can select individual components.

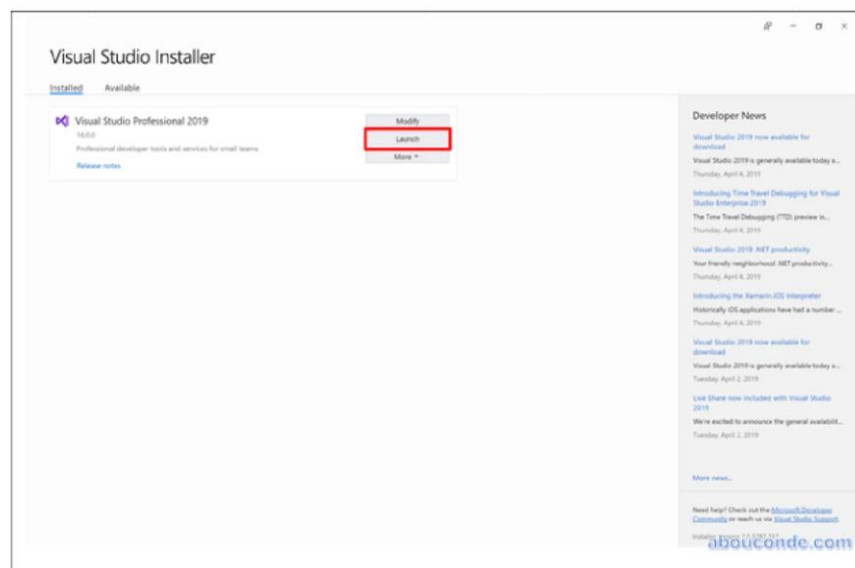

7. Select the workloads and individual components you want to install. If you're not sure, you can go with the default selection, which includes the most common development tools.

8. After selecting the desired workloads and components, click on the "Install" button.

9. The installer will start downloading and installing the selected components. This process may take some time depending on your internet connection and the components you chose to install.

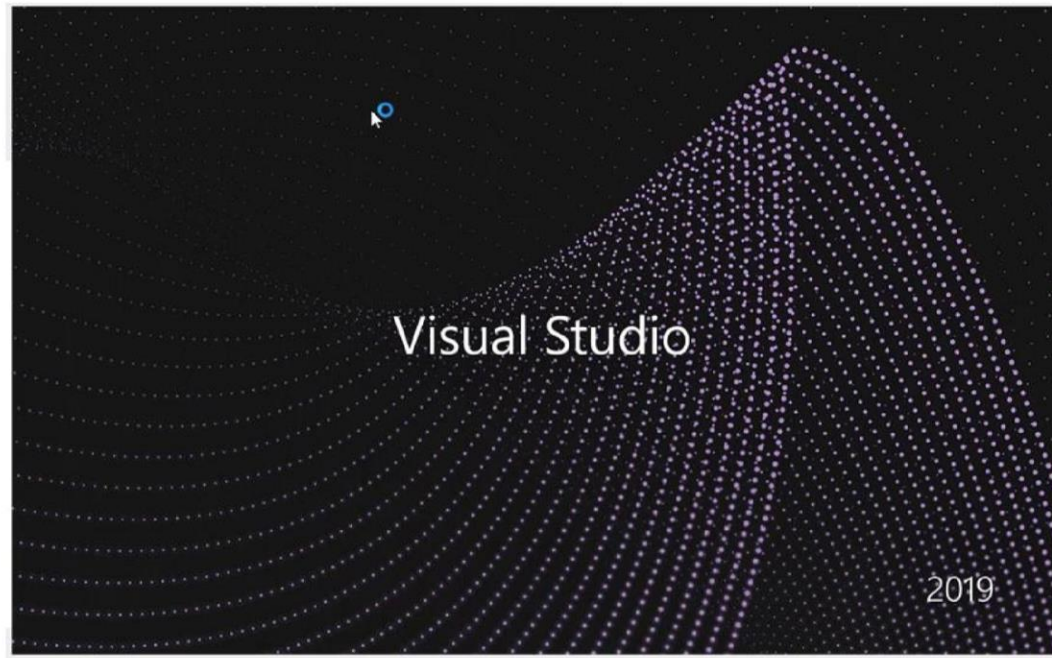

10. Once the installation is complete, you'll see a "Launch" button. Click on it to start Visual S t u d i o 2 0 1 9 C o m m u n i t y .

11. On the first launch, you'll be prompted to sign in with your Microsoft account or create a new one. Signing in is optional, but it provides access to additional features and services. You can also choose to skip this step and use Visual Studio without signing in.

12. After signing in or skipping the sign-in process, you'll see the Visual Studio 2019 welcome screen, and you're ready to start using Visual Studio.

13. On the start window, choose **Create a new**
