Database connectivity with SQL server

1. Create a Web application to display all the Empname and Deptid of the employee from the database using data reader. Database fields are (DeptId, DeptName, EmpName, Salary).
2. Create an application which display Student table (StudentId, Fname, Mname, SName, Sem, Branch, Address, City, ContactNo, EmailId) data in a table format.
3. Implement CRUD operations for both the applications.
